Earth & Atmospheric Sciences

Dr. Philip Fralick

Professor Emeritus, Lakehead University

Dr. Philip Fralick is a Professor Emeritus in the Geology Department at Lakehead University. He is a stratigrapher/sedimentologist/geochemist who over his career has investigated the linkage between tectonism and basin development, techniques for geochemical provenance analysis, and currently ocean-atmosphere geochemistry, all in rocks deposited in deep time (1.0 to 3.0 billion years ago). He has authored or co-authored over 100 journal articles including four in Nature.
